# Quiz: Systems of sentences

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

## **Problem 1:**

What color is the bird?

## **Problem 2:**

Is this system singular or non-singular?

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

**Solution 1:**

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

## Solution 1:

The bird is red. 

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

## Solution 1:

The bird is red. 

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

## Solution 1:

The bird is red. 

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

## Solution 1:

The bird is red. 

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

## Solution 1:

The bird is red. 

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

**Solution 1:**

The bird is red. 

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

## Solution 1:

The bird is red. 

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

## Solution 1:

The bird is red. 

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

## Solution 1:

The bird is red. 

# Solution: Systems of information

Given this system:

- Between the dog, the cat, and the bird, one is red.
- Between the dog and the cat, one is orange.
- The dog is black.

## Solution 1:

The bird is red. 

## Solution 2:

It is non-singular.

# Sentences $\rightarrow$ Equations

## Sentences

Between the dog and  
the cat, one is black.

# Sentences $\rightarrow$ Equations

## Sentences

Between the dog and  
the cat, one is black.

## Sentences with numbers

The price of an apple  
and a banana is \$10.

# Sentences → Equations

## Sentences

Between the dog and  
the cat, one is black.

## Sentences with numbers

The price of an apple  
and a banana is \$10.

## Equations

$$a + b = 10$$

# Quiz: Systems of equations 1

You go two days in a row and collect this information:

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought an apple and two bananas and they cost \$12.

**Question:** How much does each fruit cost?

# Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought an apple and two bananas and they cost \$12.
- **Solution:** An apple costs \$8, a banana costs \$2.

# Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought an apple and two bananas and they cost \$12.

- **Solution:** An apple costs \$8, a banana costs \$2.

# Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought an apple and two bananas and they cost \$12.

$$\text{🍏} + \text{🍌} + \text{🍌} = \$12$$

- **Solution:** An apple costs \$8, a banana costs \$2.

# Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought an apple and two bananas and they cost \$12.

$$\text{🍏} + \text{🍌} + \boxed{\text{🍌}} = \$12$$

- **Solution:** An apple costs \$8, a banana costs \$2.

# Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought an apple and two bananas and they cost \$12.

$$\text{🍏} + \text{🍌} + \boxed{\text{🍌}} = \$1\boxed{2}$$

- **Solution:** An apple costs \$8, a banana costs \$2.

# Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought an apple and two bananas and they cost \$12.

$$\text{🍏} + \text{🍌} + \boxed{\text{🍌}} = \$12$$

↙  
\$2

- **Solution:** An apple costs \$8, a banana costs \$2.

# Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{Apple} + \text{Banana} = \$10$$

A blue curved arrow points from the banana icon to the text "\$2" below it.

- **Day 2:** You bought an apple and two bananas and they cost \$12.

$$\text{Apple} + \text{Banana} + \text{Banana} = \$12$$

A blue square box is drawn around the second banana icon. A blue curved arrow points from the bottom of this box to the text "\$2" below it.

- **Solution:** An apple costs \$8, a banana costs \$2.

# Solution: Systems of equations 1

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\begin{array}{c} \text{Apple} + \text{Banana} = \$10 \\ \$8 \quad \quad \quad \$2 \end{array}$$

- **Day 2:** You bought an apple and two bananas and they cost \$12.

$$\begin{array}{c} \text{Apple} + \text{Banana} + \text{Banana} = \$12 \\ \quad \quad \quad \quad \quad \$2 \end{array}$$

- **Solution:** An apple costs \$8, a banana costs \$2.

# Quiz: Systems of equations 2

You go two days in a row and collect this information:

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought two apples and two bananas and they cost \$20.

**Question:** How much does each fruit cost?

# Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought two apples and two bananas and they cost \$20.

# Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

# Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

$$\text{🍏🍏} + \text{🍌🍌} = \$20$$

# Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

$$\text{🍏🍏} + \text{🍌🍌} = \$20$$

Same thing!!!

# Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{apple} + \text{banana} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

$$2 \text{ apples} + 2 \text{ bananas} = \$20$$

Same thing!!!

# Solution: Systems of equations 2

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{apple} + \text{banana} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$20.

$$2 \text{ apples} + 2 \text{ bananas} = \$20$$

Same thing!!!

Infinitely many solutions!

# Quiz: Systems of equations 3

You go two days in a row and collect this information:

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought two apples and two bananas and they cost \$24.

**Question:** How much does each fruit cost?

# Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.
- **Day 2:** You bought two apples and two bananas and they cost \$24.

# Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10$$

- **Day 2:** You bought two apples and two bananas and they cost \$24.

# Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10 \quad \Rightarrow \quad \text{🍏🍏} + \text{🍌🍌} = \$20$$

- **Day 2:** You bought two apples and two bananas and they cost \$24.

# Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10 \quad \Rightarrow \quad \text{🍏🍏} + \text{🍌🍌} = \$20$$

- **Day 2:** You bought two apples and two bananas and they cost \$24.

$$\text{🍏🍏} + \text{🍌🍌} = \$24$$

# Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10 \quad \Rightarrow \quad \text{🍏🍏} + \text{🍌🍌} = \$20$$

- **Day 2:** You bought two apples and two bananas and they cost \$24.

$$\text{🍏🍏} + \text{🍌🍌} = \$24$$

Contradiction!

# Solution: Systems of equations 3

- **Day 1:** You bought an apple and a banana and they cost \$10.

$$\text{🍏} + \text{🍌} = \$10 \quad \Rightarrow \quad \text{🍏🍏} + \text{🍌🍌} = \$20$$

- **Day 2:** You bought two apples and two bananas and they cost \$24.

$$\text{🍏🍏} + \text{🍌🍌} = \$24$$

Contradiction!

No solutions!

**Linear**

$$a + b = 10$$

**Non-linear**

# What is a linear equation?

## Linear

$$a + b = 10$$

$$2a + 3b = 15$$

## Non-linear

# What is a linear equation?

## Linear

$$a + b = 10$$

$$2a + 3b = 15$$

$$3.4a - 48.99b + 2c = 122.5$$

## Non-linear

# What is a linear equation?

**Linear**

$$a + b = 10$$

$$2a + 3b = 15$$

$$3.4a - 48.99b + 2c = 122.5$$

Numbers

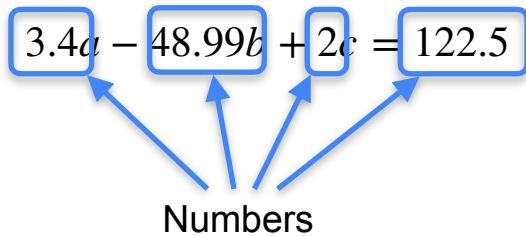

**Non-linear**

# What is a linear equation?

## Linear

$$a + b = 10$$

$$2a + 3b = 15$$

$$3.4a - 48.99b + 2c = 122.5$$

Numbers

## Non-linear

$$a^2 + b^2 = 10$$

# What is a linear equation?

## Linear

$$a + b = 10$$

$$2a + 3b = 15$$

$$3.4a - 48.99b + 2c = 122.5$$

Numbers

## Non-linear

$$a^2 + b^2 = 10$$

$$\sin(a) + b^5 = 15$$

# What is a linear equation?

## Linear

$$a + b = 10$$

$$2a + 3b = 15$$

$$3.4a - 48.99b + 2c = 122.5$$

Numbers

## Non-linear

$$a^2 + b^2 = 10$$

$$\sin(a) + b^5 = 15$$

$$2^a - 3^b = 0$$

# What is a linear equation?

## Linear

$$a + b = 10$$

$$2a + 3b = 15$$

$$3.4a - 48.99b + 2c = 122.5$$

Numbers

## Non-linear

$$a^2 + b^2 = 10$$

$$\sin(a) + b^5 = 15$$

$$2^a - 3^b = 0$$

$$ab^2 + \frac{b}{a} - \frac{3}{b} - \log(c) = 4^a$$

# Quiz

## Problem 1

Which of the following plots corresponds to the system of equations:

- $3a + 2b = 8$
- $2a - b = 3$

## Problem 2

Is this system singular or non-singular?

# Solution

## Problem 1

## Problem 2

Since the lines cross at a unique point, the system is non-singular.

# Solution

## Problem 1

## Problem 2

Since the lines cross at a unique point, the system is non-singular.

# Solution

## Problem 1

## Problem 2

Since the lines cross at a unique point, the system is non-singular.

# Solution

## Problem 1

## Problem 2

Since the lines cross at a unique point, the system is non-singular.

# Solution

## Problem 1

a)

## Problem 2

Since the lines cross at a unique point, the system is non-singular.

# Solution

Non-singular matrix

	
1	1
1	2

Determinant

$$\begin{array}{ccccc} 1 & & & & 1 \\ & 2 & & & \\ & & 1 & & \end{array}$$

$$1 \cdot 2 - 1 \cdot 1 = 1$$

Singular matrix

	
1	1
2	2

Determinant

$$\begin{array}{ccccc} 1 & & & & 1 \\ & 2 & & & \\ & & 2 & & \end{array}$$

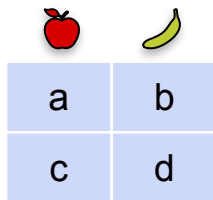

$$1 \cdot 2 - 2 \cdot 1 = 0$$

# Determinant and singularity

	
a	b
c	d

$$ad - bc$$

# Determinant and singularity

a	b
c	d

**Matrix is singular**

$$ad - bc$$

**Determinant is zero**

# Quiz: Determinant

**Problem 1:** Find the determinant of the following matrices

**Matrix 1**

5	1
-1	3

**Matrix 2**

2	-1
-6	3

**Problem 2:** Are these matrices singular or non-singular?

# Solutions: Determinant

**Matrix 1:**  $\det = 5 \cdot 3 - 1 \cdot (-1) = 15 + 1 = 16$

5	1
-1	3

**Non-singular**

**Matrix 2:**  $\det = 2 \cdot 3 - (-1) \cdot (-6) = 6 - 6 = 0$

2	-1
-6	3

**Singular**

## **System of equations (3x3)**

# Quiz: Systems of equations

**Problem 1:** You're trying to figure out the price of apples, bananas, and cherries at the store. You go three days in a row, and bring this information.

- **Day 1:** You bought an apple, a banana, and a cherry, and paid \$10.
  - **Day 2:** You bought an apple, two bananas, and a cherry, and paid \$15.
  - **Day 3:** You bought an apple, a banana, and two cherries, and paid \$12.
- How much does each fruit cost?

# System of Linear Equations

---

**Linear dependence and  
independence (3x3)**

# Linear dependence and independence

$$a = 1$$

$$b = 2$$

$$a + b = 3$$

# Linear dependence and independence

$$\begin{aligned} a &= 1 \\ b &= 2 \\ a + b &= 3 \end{aligned} \qquad a + 0b + 0c = 1$$

# Linear dependence and independence

The diagram illustrates the substitution of values for variables  $a$  and  $b$  into two linear equations. On the left, the values are listed:  $a = 1$ ,  $b = 2$ , and  $a + b = 3$ . On the right, the equations are  $a + 0b + 0c = 1$  and  $0a + b + 0c = 2$ . Two blue curved arrows originate from the right side of the first two equations on the left and point to the right side of the corresponding equations on the right, indicating the substitution of the values of  $a$  and  $b$  into the equations.

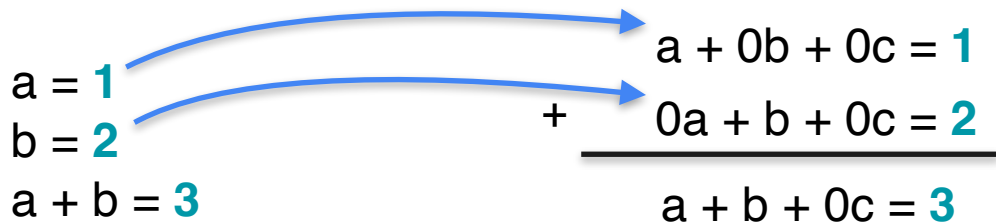

$$\begin{array}{l} a = 1 \\ b = 2 \\ a + b = 3 \end{array} \quad \begin{array}{l} \rightarrow a + 0b + 0c = 1 \\ \rightarrow 0a + b + 0c = 2 \end{array}$$

# Linear dependence and independence

$$\begin{array}{l} a = 1 \\ b = 2 \\ a + b = 3 \end{array} \quad \begin{array}{l} \xrightarrow{\quad} \\ \xrightarrow{\quad} \\ + \end{array} \quad \begin{array}{l} a + 0b + 0c = 1 \\ 0a + b + 0c = 2 \\ \hline \end{array}$$

# Linear dependence and independence

$$\begin{array}{l} a = 1 \\ b = 2 \\ a + b = 3 \end{array} \qquad \begin{array}{r} a + 0b + 0c = 1 \\ + \quad 0a + b + 0c = 2 \\ \hline a + b + 0c = 3 \end{array}$$

# Linear dependence and independence

The diagram illustrates the derivation of a linear equation from two given equations. On the left, two equations are listed:  $a = 1$  and  $b = 2$ . Below them, the equation  $a + b = 3$  is shown. On the right, two equations are listed:  $a + 0b + 0c = 1$  and  $0a + b + 0c = 2$ . These two equations are added together, as indicated by a plus sign and a horizontal line. The result of the addition is  $a + b + 0c = 3$ . Blue curved arrows show the substitution of  $a = 1$  into the first equation on the right,  $b = 2$  into the second equation on the right, and the sum  $a + b = 3$  into the resulting equation on the right.

$$\begin{array}{rcl} a = 1 & \xrightarrow{\quad} & a + 0b + 0c = 1 \\ b = 2 & \xrightarrow{\quad} & 0a + b + 0c = 2 \\ a + b = 3 & \xrightarrow{\quad} & \hline a + b + 0c = 3 \end{array}$$

# Linear dependence and independence

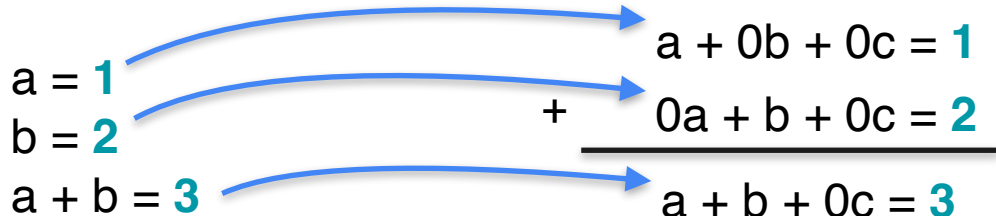

Diagram illustrating the derivation of a third equation from two others:

$$\begin{array}{rcl} a = 1 & \xrightarrow{\quad} & a + 0b + 0c = 1 \\ b = 2 & \xrightarrow{\quad} & 0a + b + 0c = 2 \\ a + b = 3 & \xrightarrow{\quad} & a + b + 0c = 3 \end{array}$$

The third equation is derived by adding the first two equations, as indicated by the '+' sign and the blue arrows.
